Govt Exams Dashboard

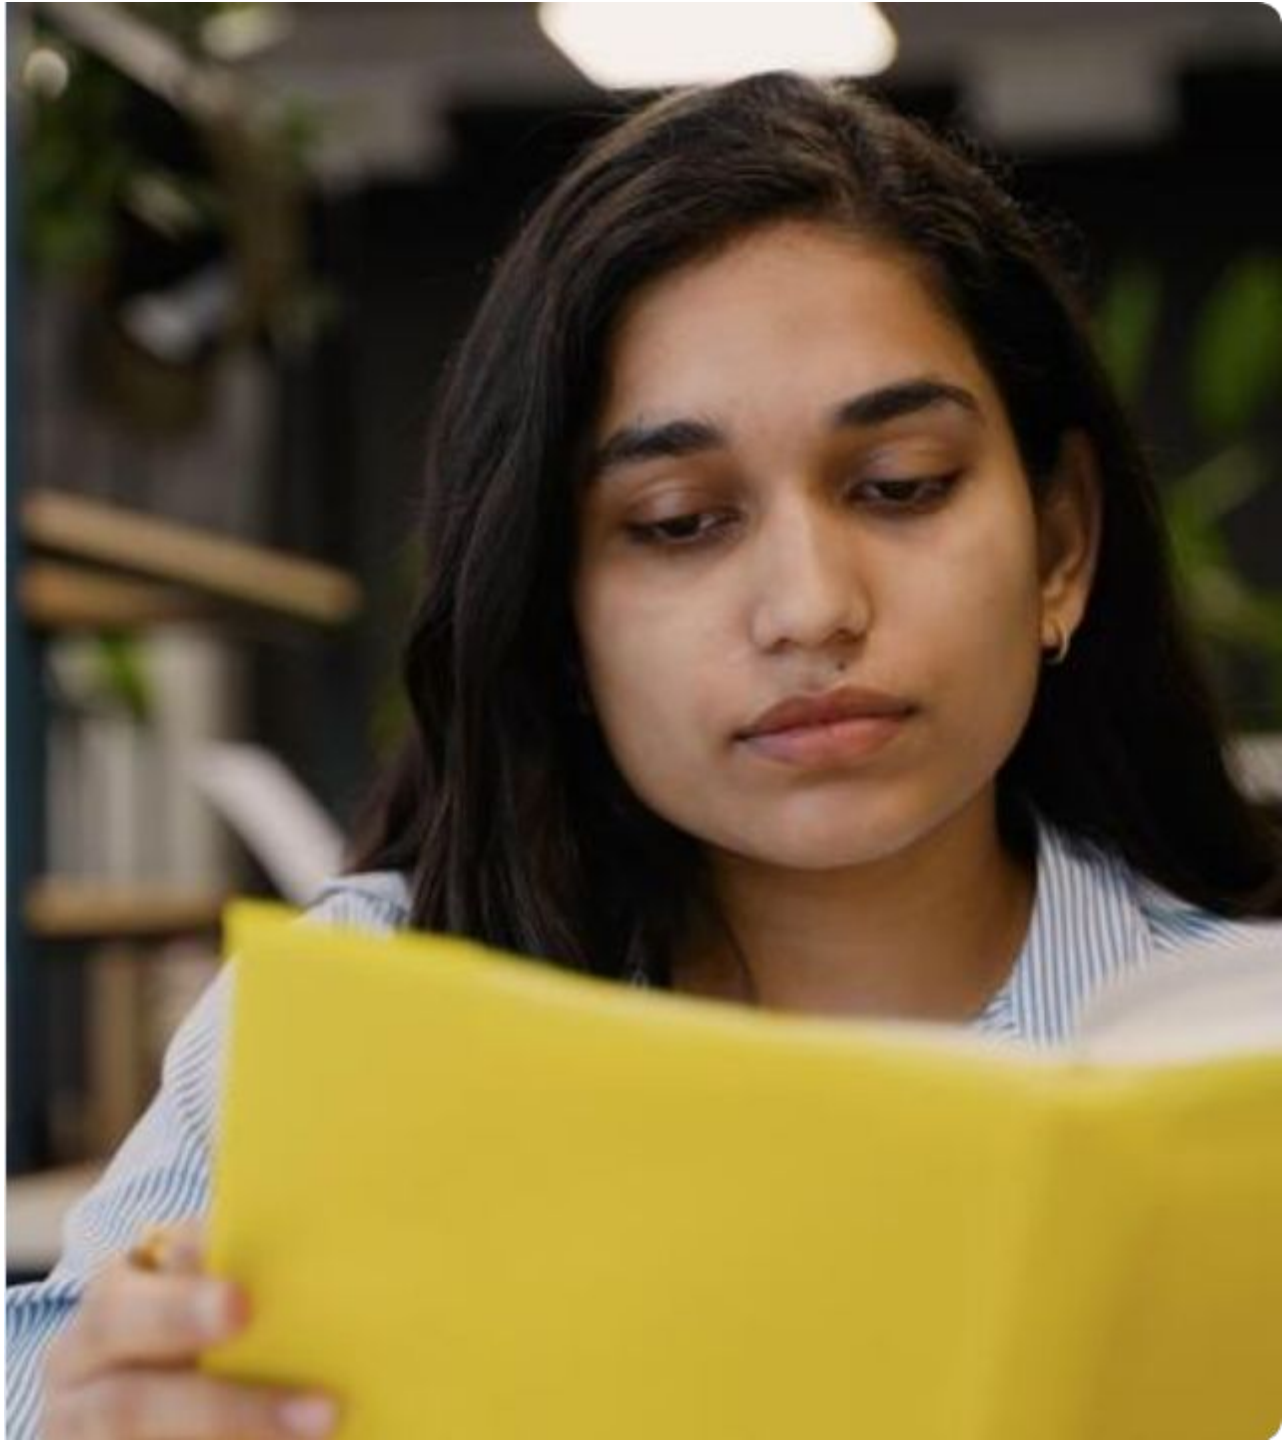
An analytical dive into Applicant Volumes, Drop-out Rates, and the Reality of Competition (2019-2024)

BHUVAN WASAN | DATA ANALYST

The Competitive Reality

Every year, millions of Indian youth dedicate countless hours preparing for prestigious public sector roles. However, the data tells a deeper story.

This project analyzes massive datasets to uncover the true drop-out rates before test day, the immense nationwide competition, and the staggering final selection rates across UPSC, SSC, RRB, and IBPS.



Scale of the Data

59M

Total Applicants Analyzed

Representing an immense demographic pool

0.54%

Average Selection Rate

The fierce reality of final placements

Under the Hood: Data Engine

Data Preparation

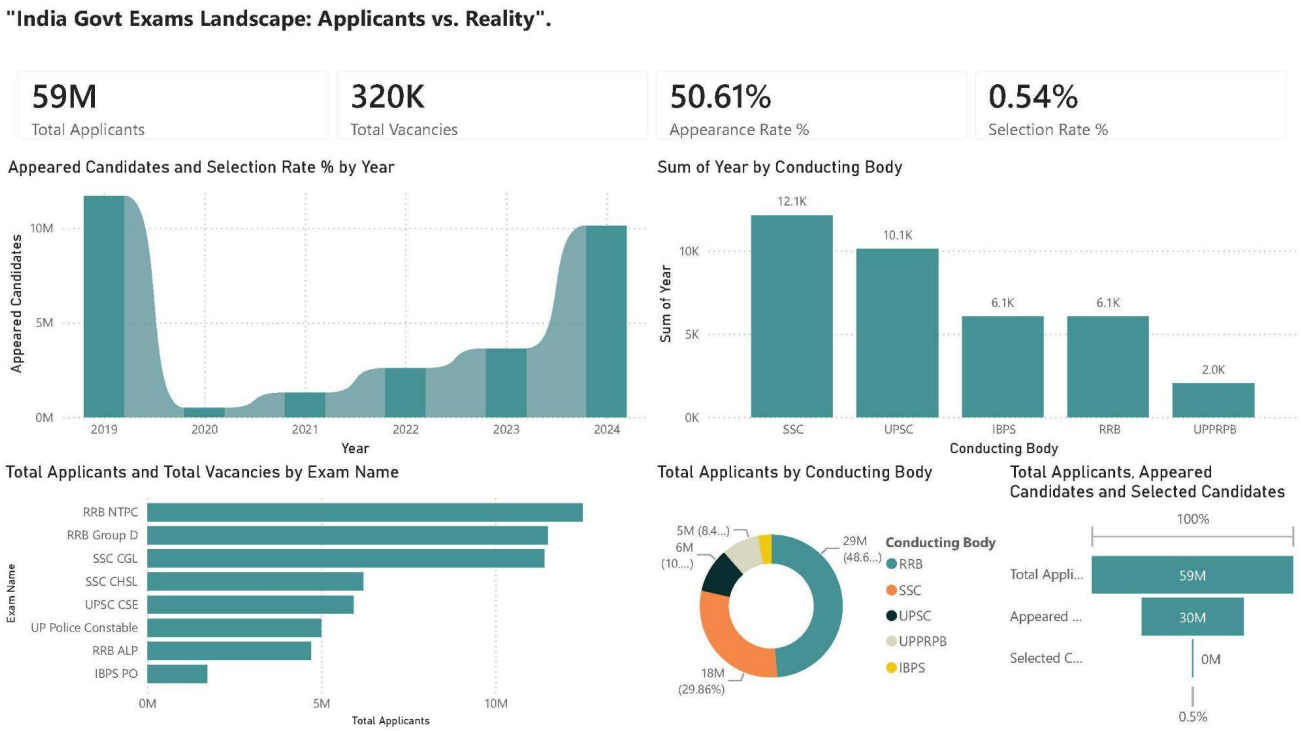
Cleaned and transformed massive raw datasets using Power Query. Validated numeric aggregations, established custom hierarchical categories for Central vs. State level exams, and calculated initial drop-out vectors.

DAX Modeling

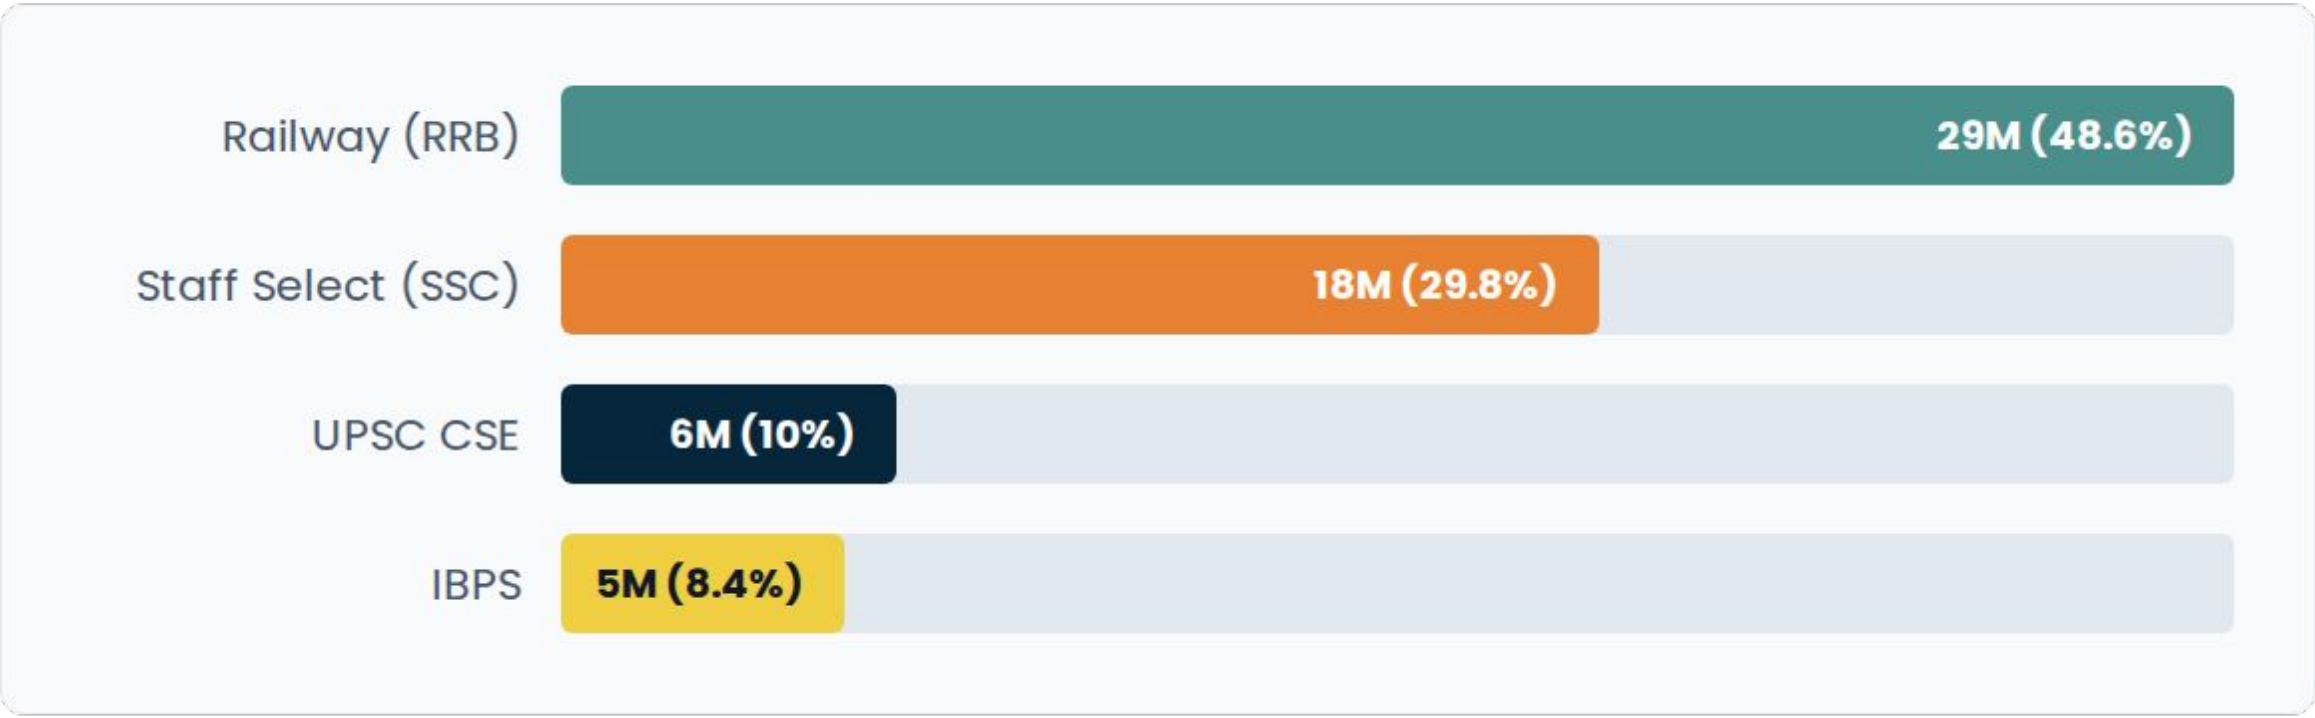
Engineered dynamic Data Analysis Expressions (DAX) to drive interactivity. Key measures including [Selection Rate %] and [Appearance Rate %] were built to power responsive KPI cards and intelligent tooltips.

The Power BI Dashboard

A fully interactive visualization interface featuring a clean, modern aesthetic driven by teal, navy, and orange accents.
The dashboard features dynamic charts tracking year-over-year appearance rates, applicant volume by board, and the stark funnel of total applicants versus selected candidates.

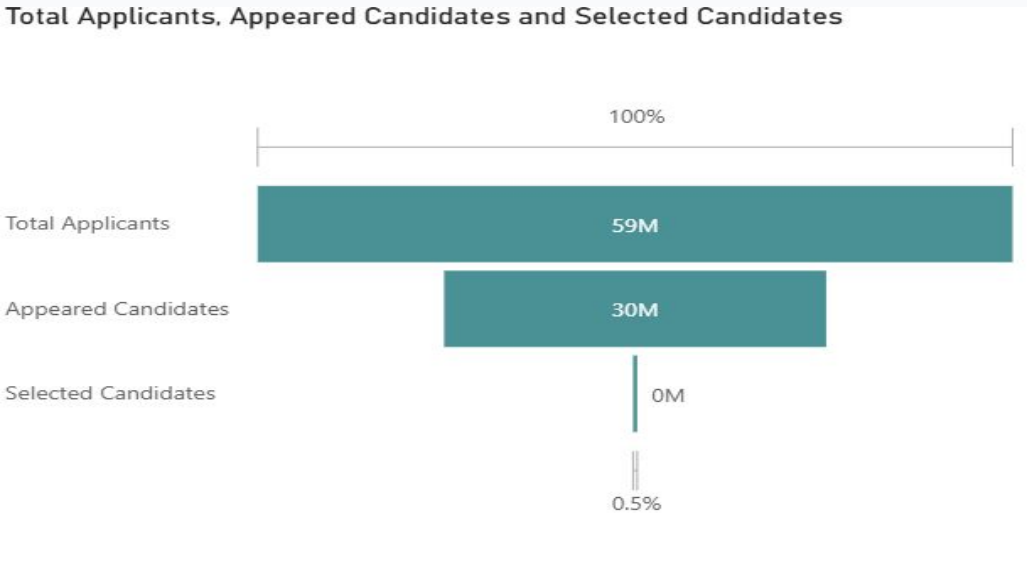


Applicant Volume by Board



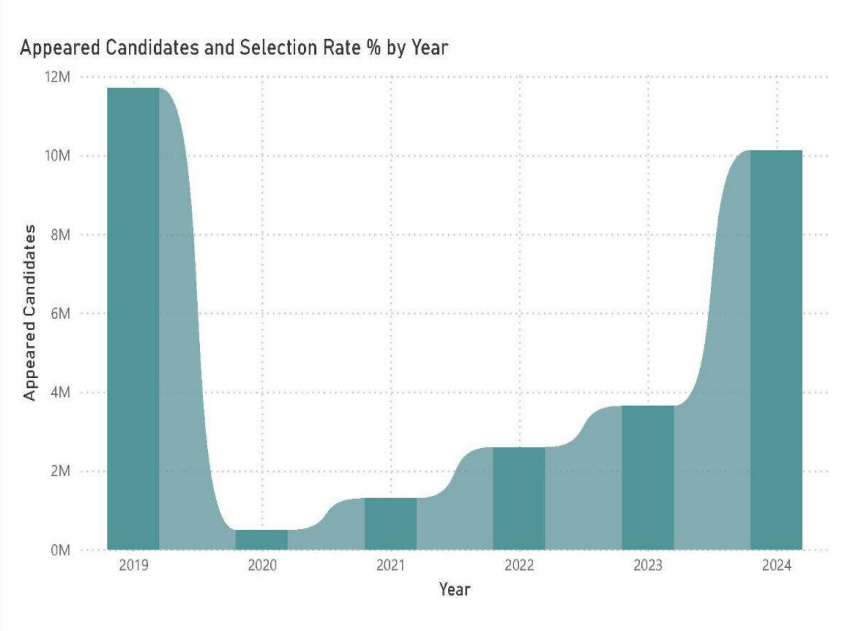
The Railway Recruitment Board processes the highest aggregate volume, accounting for nearly half (48.6%) of the total applicant traffic.

Visualizing the Metrics



The Elimination Pipeline

Graphically illustrating the sharp drop-off: 59M Applied → 30M Appeared → 320K Selected.



Year-over-Year Trends

Tracking the relentless growth of exam popularity resulting in a 50.61% appearance rate.

Key Analytical Insights

- **Unprecedented Volume:** Recruitment drives for RRB collectively gathered over 29 Million active applications during the observed period.
- **The "No-Show" Factor:** Data reveals a consistent trend where the overall appearance rate sits at just 50.61%, meaning nearly half of all registered candidates drop out.
- **Elite Competition:** Across the board, the final selection rate remains incredibly competitive, hovering at a mere 0.54% against total applicants.
- **Actionable Data:** Through DAX modeling, this dashboard transforms isolated press releases into a transparent view of public employment trends.

Thank You

Let's connect and talk data.
